FOR IMMEDIATE RELEASE
DECEMBER 2010

Process Control Launches New Website

Process Control would like to announce the launch of its new website at www.process-control.com. With a fresh new look, users can navigate with ease through a site that has been designed with industrial buyers in mind. The new primary feature is an integrated product catalog that allows users to search and compare Process Control equipment and technical data. Product details are directly visible on the website without the need to download a specification sheet. The website also features a profile of our company and management team and a full listing of our sales representatives across the United States. It is now easier than ever for processors in the plastics industry to find products and information to meet their auxiliary equipment needs.

Established in 1967, Process Control Corporation has an unending commitment to the design and engineering of advanced auxiliary machinery for the plastics processing industry. Our goal is to provide the most accurate equipment and exceptional customer service. We revolutionized processing with development of Automatic Scrap Recycling for in-line processing of film scrap and the first continuous gravimetric blending system. Process Control continues to lead the industry with advanced design and innovative solutions for the global marketplace. Please visit our website at www.process-control.com.
