## August 2018 PCC Special Project

Process Control recently completed a custom job that includes a 25kg mixer only. The mixing chamber was taken from the G2 Gravimetric Blender (as shown) and modified to include extra safety interlocks, a modified top plate for loading, and simplified controls. Once mixing stops, the cartridge gate opens allowing material to gravity flow out the bottom of the chamber. Blow-down with high pressure air streams also begins at stoppage and assists to quickly empty all pellets from the mixing chamber. This self-cleaning allows quick and easy change-over.

Process Control maintains a complete engineering staff including mechanical designers and engineers, electrical, software and communication engineers.
